Instructions

"**Find Address**" returns addresses through reverse geocoding latitude and longitude coordinates. Enter the known latitude and longitude coordinates into the fields and click the load button. Latitude and longitude fields will accept degrees decimal, degrees minutes decimal or degrees, minutes and seconds.

"**Selected Location**" displays the reverse geocoded location of the current latitude and longitude (approximation only).

To find the locations of several latitude-longitude coordinate pairs use the **Reverse Batch Geocode** page.

*Output is an approximation only. Results should be independently verified if accuracy is required.
