

Visible Light

Since a lot of work these days involves light properties (displays, LEDs, Emitter/detectors, etc.), this visible light spectrum chart should be useful. Information on light addition and subtraction is included. Here's a good tutorial on computer-generated colors, and here's the C.I.E. Chromaticity Diagram.

Additive Color System

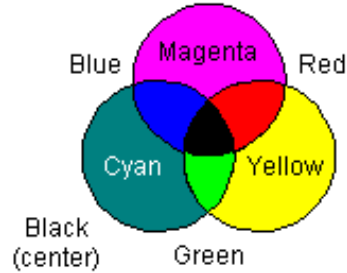

(adding colors to ultimately make white)

Primary additive colors for light are Red, Green and Blue

Subtractive Color System

(subtracting colors to ultimately make black)

Primary subtractive colors for light are Magenta, Yellow and Cyan

Color Wheel
